Section 1

Purpose of Web service

The Payments Web Service is a comprehensive money transfer service that can be used to remit money to beneficiaries through various payment settlement systems. The three web service calls available under this API service are Payments details, Fund confirmation and Domestic Payments. This service supports GST payments as well.

This service works on Asynchronous mode for transaction processing. The status of transactions shall be checked by calling the Domestic Payments details API after a preset time duration.

Authentication/Security

2 Way SSL is the recommended connectivity method available for accessing the service.

2 Way SSL

This will involve SSL Certificate exchange and trust between Bank and Corporate and customer's Static IP whitelisting by the bank.

SSL Certificates - These will be used to establish a peer-to-peer trust relationship. By means of these certificates all incoming and outgoing XML messages will be encrypted/decrypted and sent by way of HTTPS for efficiency.

For accessing the API in UAT and Production - 2048 bit root, sha2 256 bit encryption, certificate from a Class 3 CA and TLS1.2 version and Static IP will be required.

Static IP whitelisting will be needed both in UAT and Production

LDAP Authentication – One time User ID and Password will be created and sent via Email on the Authorized Email ID of each Corporate during PRODUCTION Phase of on Boarding. This User ID and Password are to be passed with each request to the Web service to authenticate the Corporate.

For UAT use the below credentials:
UserId: testclient
Password will be shared separately on email

API Authentication – Client Id and Secret are (generated one time, during API Subscription process on API Portal hosted on locations mentioned in next section) are to be provided with each request with below parameters in HTTP headers.
X-IBM-Client-Id
X-IBM-Client Secret

API Portal Links

For subscribing to the API in UAT Environment – https://uatdeveloper.yesbank.in

For subscribing to the API in Production Environment – https://developer.yesbank.in

Test Environment:

White list IPs – Partner Public IP has to be white listed to allow test requests.

Web Service Description

The Web Service description can be accessed at the following url:

https://skyway.yesbank.in/app/live/api-banking/payment-details

Web service Interface Overview:

Category	Method Name	Purpose
Post	domestic-payments	To submit Asynchronous payment order transaction. Such transfers will be acknowledged instantly and processed later.
Post	payment-details	Retrieve status for transaction previously submitted
Post	fund-confirmation	Retrieved the funding account balance.

Process Note

Customers may initiate transfer request for payment transaction to Yes Bank Ltd (YBL) using various transaction type like IMPS, NEFT, RTGS, APBS, FT or ANY (When 'ANY' is passed, the transfer type will be determined by the bank system after the request is received).

Following Decision Grid indicates the transaction behavior based on the Request Type, Amount and applicable cut off for the mode of payment.

Request Type	Yes Bank Beneficiary?	Amount	RTGS Cut off	IMPS Enabled beneficiary?	IMPS?	NEFT?	RTGS?	FT?
ANY	N	< 5 L		Y	Y			
ANY	N	< 5 L		N		Y		
ANY	N	>2L	Within cut off	Not Applicable			Y	
ANY	N	>2L	Outside cut off			Y		
ANY	Y	No check	No check	No check				Y
NEFT				No check		Y		
IMPS				Y	Y			
IMPS				N	IMPS Reject			
RTGS		>2L	Within Cut off				Y	
RTGS		>2L	Outside Cut off				Reject	
FT								Y

****GST Payments coming in with transfer type 'ANY' will be routed through 'NEFT' or 'RTGS', whichever is best suited.**

Transfer Type wise Processing

Transactions can be raised for NEFT, RTGS, IMPS, A2A or ANY transfer types. These transactions will go through the above statuses mentioned in Transaction status section

IMPS transactions

The amount is debited from the remitter and a request is sent to NPCI which in turn forwards it to the beneficiary bank. Within 90 seconds, NPCI sends back the response to the remitter bank which in turn is intimated to CORPORATE as a transaction status response. Any transactions above Rs. 5 L will be rejected due to IMPS transaction amount limit being Rs. 5 L.

Status of IMPS Transaction	Meaning	What to Do
SettlementCompleted	Transaction has been successful	
SettlementInProcess	Final status of IMPS transaction is not known from the beneficiary bank/NPCI	Check the status by calling payment-details API after T+1 (day). If the Final Status is not available even after T+1, kindly raise a dispute with the bank support team for investigation
Pending	Transaction is in process	Check the status by calling payment-details API before refunding/reinitiating the transaction. If the Final Status is not available even after one working day, kindly raise a dispute with the bank support team for investigation
FAILED	Transaction has failed	Kindly check the error code sent in the response basis which appropriate action is to be taken internally or with the beneficiary before refunding / reinitiating the transaction. Retry the transaction post correction if required. If Corporate account if debited, the same would be credited instantly or once reconciliation is completed.

NEFT Transactions

The transactions will be bunched as a batch and processed at pre-defined time intervals as per RBI settlement cycle. The transactions are processed as per RBI NEFT window between 8 AM and 7 PM. Transactions initiated after 7 PM will be processed after EOD processing. Also NEFT transaction will not be allowed on RTGS Holidays, 2nd and 4th Saturday and all Sundays and it will be processed on next working day. It is beneficial if transactions are sent till 6:00 PM. The remitter bank debits the account and sends the transaction request further The beneficiary bank has to send back a negative confirmation in the next 2 cycles(hours), however this SLA is not always met. As the confirmations are received, the status is updated to either completed or failed.

Status of NEFT Transaction	Meaning	What to Do
SettlementInProcess	Transaction has been sent to beneficiary bank.	Check the first status by calling getStatus API after 20-30 min and second status after 3 Hours.If the transaction has been sent in last batch of NEFT, check the status on next working day. If the final status is not available for 2 working days, raise a dispute with the bank support team for investigation. If transaction has been posted after NEFT cut-off time then check the status on next working day
SettlementCompleted	Transaction is successful	
Pending	Transaction is in process	Check the status by calling payment-details API If the Final Status is not available even after one working day, kindly raise a dispute with the bank support team for investigation
SettlementReversed	Beneficiary bank has not accepted the transaction	The transaction has been returned by the beneficiary bank. Kindly check with the beneficiary for exact discrepancy. Retry the transaction post correction if required. Remitter's account, if debited would be credited back. Will also consider for transactions returned by Beneficiary Bank after confirmation from NPCI/sfms
FAILED	Transaction has failed	Kindly check the error code sent in the response basis which appropriate action is to be taken internally or with the beneficiary before refunding/reinitiating the transaction. Retry the transaction post correction if required. If Corporate account if debited, the same would be credited instantly or once reconciliation is completed.

RTGS transactions

The transactions are processed as per RBI RTGS window between 8 AM and 6 PM. The remitter bank debits the debit account of the customer and sends the transaction request to RBI for further processing. As per agreed process the beneficiary bank has to send back the acknowledgement in next 15 minutes. As and when the confirmations are received, the status is updated to either SettlementCompleted or FAILED. Kindly initiate a payment-details call after 15 minutes or alternatively the status will be posted by the bank to your web service in case you have opted for push status service.

RTGS transactions sent after RTGS Cut-off time would be rejected and not rescheduled.

Status of RTGS Transaction	Meaning	What to Do
SettlementInProcess	Transaction has been sent to beneficiary bank.	Check the first status by calling getStatus API after 20-30 min and second status after 3 Hours. If the final status is not available raise a dispute with the bank support team for investigation
SettlementCompleted	Transaction has been successful	
Pending	Transaction is in process	Check the status by calling payment-details API after 30 minutes. If the Final Status is not available, raise a dispute with the bank for investigation
FAILED	Transaction has failed	Kindly check the error code sent in the response basis which appropriate action is to be taken internally or with the beneficiary before refunding / reinitiating the transaction. Retry the transaction post correction if required. If Corporate account if debited, the same would be credited instantly or once reconciliation is completed.

Duplicate Check

For incoming requests, when a request is received, the UniqueRequestNo is checked against existing requests for a duration of last 90 days. Data more than 90 days old will be migrated:-

1. if there is already a successful transaction, the request is rejected as duplicate
2. if there is in 'pending' status, the request is rejected as 'pending'
3. if there is already a failed transaction, the request is accepted as 'retry' attempt

To summarize, for the following statuses received in payment-details call, money will never reach the beneficiary, so customers, if required may initiate the transaction again after taking necessary action.

1. FAILED
2. SettlementReversed

For the following status' received in payment-details call, money may reach the beneficiary, so customers should use payment-details API till final status is available, or may reach out to the bank support staff post above mentioned TAT for further investigation.

1. SettlementInProcess
2. Pending

Pending Nodal and Refund Payments

As per RBI regulations Nodal Transfers can be made only to registered beneficiaries. The Customers who have an agreement with the bank for Nodal Transfers shall initiate the payment with Purpose Code shared with them by the bank and pass pre-registered Beneficiary Code in the request instead of Beneficiary Detail. Service will allow Nodal transfers only to beneficiaries already registered with the bank and/or Refund Transfers (passed with beneficiary details) to any beneficiary. Please get in touch with the Bank team to understand Beneficiary Registration Process through relevant APIs.

(Refer to **Sample Domestic Payments Request for *Nodal* Payments)**

GST Payments

As per RBI regulations GST Transfers can be made using CPIN generated on GST Portal. Corporates can make their GST payments by passing their CPIN in beneficiaryAccountNo with purposeCode as 'GST'.

GST Payments coming in with transfer type 'ANY' will be routed through 'NEFT' or 'RTGS', whichever is best suited.

(Refer to **Sample Domestic Payments Request for GST Payments)**

Pennydrop (Beneficiary Name check) Service

Corporate customers will be able to verify the beneficiary details (i.e. Name of the Account Holder with the Beneficiary Bank) prior to carrying out the actual transactions and will allow to send transactions only to verified beneficiaries for the remittances via IMPS as transfer type.
Corporate Customer will have to initiate FT2 domestic payment service with ₹ 1.00 (one) or more to YesBank.
Corporate Customer will initiate payment details API to get details of the beneficiary.
Yes Bank can provide the name of the account holder with the beneficiary bank only if the beneficiary bank provides the name as a part of response for IMPS.

Sample request and response for Pennydrop

Non English text restriction

Domestic Payments service will accept only English text in the API request and response. Any Non English text will be rejected at the schema level itself.

Sample non English values: ముప్పవరపు మనోజ్ కుమార్, Евгений Евгеньевич Румянцев

Section 2: Interface Methods

Method Name: GetStatus

- It is recommended to call Status API after all Payment API request calls.
- Please do not check status instantly/simultaneously after sending Payment request as is not a recommended process.
- We recommend to check the status by calling payment-details API according to mentioned duration for respective pay mode .
    - IMPS/ FT : Status check should be done after 15-20 min once Payment is initiated .
    - NEFT / RTGS : Status check should be done after 20-30 min once Payment is initiated

Please find the Input and Response JSON Structures below

Method Name: fund-confirmation

Description:

Used to retrieve the balance in the funding account.

Sample Request Structure

```

Circuit Breaker

Circuit breaker is a functionality where if you initiate any transactions while the backend system is down, it will auto-reject the transaction with error code:- “ns:E503” along-with description “Service Unavailable”.

In case of any queries / clarification required, you can write to us at dlesbl2support@yesbank.in

Below is the sample response of FT3 transaction in case Backend system is down

FT3 Response -

```

    }
  }
}
```

Note: Transactions with LEI value less than 20 characters will fail with error code ns:E400 - Bad Request

Element	Description	Type	Format/ Values	Element
beneficiaryLEI	For transfer of 50cr or more beneficiary LEI to be passed	Alpha numeric	20	Optional

Section 3: Response Codes

Domestic-payments Response Codes

#	statusCode	subStatusCode	Message(subStatusText)	When Does it Come?	Recommended Action	Error Classification
1	Received		Transaction has been Accepted	Transaction initiated is a valid transaction and has been accepted for processing	Transaction successful	Technical
2	Duplicate	ns:E8000	A transaction with same reference number is already processed or under processing	UniqueRequestNo has already come before for a successful transaction	Retry with a new UNR	Technical

Payment-details -Response Codes

Note: All failed transactions can be considered as Failed. Status will not change after that. ESB does not retry for any failed transactions.
For every payment made, checking status of respective transaction is advisable before any retry.
If Status API doesn't give the finality of the transaction after multiple attempts, get in touch with YBL support Team (Refer escalation matrix in Section 5)

No	Status	ErrorCode	ErrorSeverity	When Does it Come?	Recommended Action	Error Classification	Action Code TEXT (50 chars)	Action Description TEXT(256 chars)
1	FAILED	ns:E307	Transaction has failed at downstream system/transaction cannot be processed during this period	Technical Failure	Retry initiating transactions 3 times at an interval of 30 mins considering status remains failed for every attempt. In case status still remains failed, please contact APIL1.helpdesk@yesbank.in with transaction details along with error code	Business	AC_RETRY_TXN	Retry transaction

2	FAILED	ns:E307	Current Transaction Time not within Window Period.	Business Failure	Please reinitiate as per next available window	Business	AC_TXN_FAILED	Please reinitiate as per next available window
2	FAILED	ns:E402	Insufficient Balance in debit account, payment required	When the Debit account does not have sufficient Balance to process the transaction	Kindly fund the debit account and retry	Business	AC_TXN_FAILED	Transaction Failed. Please check error description and action
3	FAILED	ns:E403	Customer / Account Access Forbidden	The Basic Auth User ID & Password sent in the request, was not found in the configuration.	The Basic Auth User ID & Password are provided to you by the bank. Ensure that you are using the correct values. If you believe you are, then contact support.	Technical	AC_CONTACT_SUPPORT	Technical error / Invalid message. Contact Support
4*		ns:E404	Request Not Found	Request Reference Number sent in the request was not found.	Retry with a valid Request Reference Number. If Request Number was valid please do payment details status check 3 times in 30 mins duration and if still request is not found then u can initiate a new transaction	Business	AC_TXN_NOTFOUND	Transaction not found

5	FAILED	ns:E405	None of the transfer types allowed to the app id or customer can perform the requested transaction.	The Transaction Type is not from the list specified	Retry the transaction with a valid transferType or with ANY	Business	AC_TXN_FAILED	Transaction Failed. Please check error description and action
6	FAILED	ns:E406	Beneficiary not acceptable	Problem with beneficiary account	Kindly check with Beneficiary before reinitiating transfer	Technical	AC_TXN_FAILED	Transaction Failed. Please check error description and action
7	FAILED	ns:E410	None: The requested entity is no longer available	When a CBS reference no is not found in the core banking table during a getStatus of the transaction	Please do Get Status after some time	Business	AC_TXN_FAILED	Transaction Failed. Please check error description and action
8*	FAILED	ns:E429	(Limit Daily/transaction/rate) exceeded	Number of requests that have come from you have exceeded the permissible limit set by an upstream system	Retry next day	Technical	AC_RETRY_TXN_NEXTDAY	Retry transactions next day
9	FAILED	ns:E502	Bad Gateway	An upstream service returned an unexpected error	Do Get status after 30 minutes and act basis the response	Technical	AC_RETRY_TXN	Retry transaction
10	FAILED	ns:E1001	The transaction amount exceeds the maximum amount for IMPS:	The transaction amount exceeds the maximum amount for IMPS:	Ensure Transaction amount is less than or equal to INR 2,00,000	Business	AC_INVALID_DATA	Invalid/Incorrect data in message. Update and retry

11	FAILED	ns:E1002	The transfer currency is not supported. Supported currency is INR.	The transfer currency is not supported. Supported currency is INR.	Check the currency passed in the request and rectify before reinitiating	Business	AC_INVALID_DATA	Invalid/Incorrect data in message. Update and retry

***Note :**

Received ns: E500 error code in Status enquiry- (GetStatus API) This error is received when there is connectivity failure in downstream system at banks end. Recommended action-

- Check if there is any email notification from Yesbank on Down time.
- Please do not mark the transaction as Failed, can keep the status as Pending.
- Check status Enquiry 4 times in duration of half an hour to check the updated status if received ns:E500.
- If reference number is not generated then please reinitiate request with same request number, If CBS reference number is generated then raise request to L2 support team on mail and accordingly take decision on the status of the transaction. In case client system does not allow to reinitiate with same request number then raise request to L2 support team on mail and accordingly take decision on the status of the transaction.

Received ns: E404 – as the payment request for which you are checking status have not reached us or old request beyond 30 days is migrated.
Recommended action:

- Please do not check status instantly after sending Payment request. We suggest checking the status by calling payment-details API according to mentioned duration for respective pay mode.
- Check status thrice after 30 min of initiating a transaction. On same response please initiate new request with same request number. In case client system does not allow to reinitiate with same request number then raise request to L2 support team on mail and accordingly take decision on the status of the transaction.
- Recommended process for transaction status of transactions more than 30 days, please refer the section Duplicate check.

Received ns: E429: Please do not re-initiate the transaction as this is the limit on request of API calls not status of the transaction. Please do call the status API to get the updated status of the transactions

Received npci:E91 with Failed status : If status gives **Failed** instead of **SettlementInProcess**. Raise to L2 support team on mail and accordingly take decision on the status of the transaction

Section 4: Schema Level validations

Schema Level validations which will be thrown upfront

#	Code	SubCode	Meaning	When Does it Come	Recommended Action	payment-details	domestic-payments	fund-confirmation	Error Classification
1	Sender	ns:E400	Bad Request	When any request elements fail schema validation.	Fix the Request (Likely Schema Validation Error) If it is a payment request, fix the payment request & if it is a status check request, fix the status check request	Y	Y	Y	Technical
2	Sender	ns:E403	Customer / Account Access Forbidden	The Basic Authorization User ID & Password pair sent in the request, was not found in the configuration.	The Basic Authorization User ID & Password are provided to you by the bank. Ensure that you are using the correct values. If you believe you are, then contact support.	Y	Y	Y	Technical
3	Sender	ns:E401	401 Unauthorized	The credentials passed is not correct	Please retry using correct credentials	Y	Y	Y	Technical

Kindly refer to fault error code for action on transaction status, fault code in Header is FYI

HTTP Errors

#	HTTP Status code	Meaning	When does it come	Recommended Action	Error Classification
1	401	Authorization Required	User credentials are invalid	The Basic Authorization User ID & Password are provided to you by the bank. Ensure that you are using the correct values. If you believe you are, then contact support.	Technical
2	404	Not Found	Incorrect EndPoint	Contact Support after verifying the endpoints	Technical
3	429	(Limit Daily/transaction/rate) exceeded	Number of requests that have come from you have exceeded the permissible limit set at Data Power	Retry next day	Technical
4	500	Internal Server Error	Error at Internal Server	Retry Get status after 30 Mins	Technical

Note:
Received HttpCode 500 error in response to the Fund transfer API/start Transfer API and/or in Get status API due to requests timeouts/ by an error on the target/backend server:

- Please do not mark the transaction as Failed, can keep the status as Pending.
- Check status Enquiry in duration of half an hour to check the updated status if received http500 while initiating start transfer/fund transfer API
- Check status Enquiry in duration of 10-15 mins to check the updated status if received http500 while calling the **Get status API** to check the status of the transaction
- Raise to L2 support team on mail and accordingly take decision on the status of the transaction

If Status API doesn't give the finality of the transaction, get in touch with YBL support Team (Refer escalation matrix in Section 5)

Section 5: Escalation Matrix

Issue	TAT	Support Team	Escalation
